B1G Corporation

HRIS Core Module – Process Flow & System Requirements

The **Core Module** serves as the **central configuration section** of the HRIS. It stores essential company information and automatically generates the company **Organizational Chart** based on employee data.

The Core module contains **two sub-tabs**:

1. **Company Profile**
2. **Organizational Chart**

1. Core Module Structure

Tab	Description
Company Profile	Stores official company information
Organizational Chart	Automatically displays reporting structure

2. Tab 1 – Company Profile

Company Profile Fields

The system should allow HR Admin to **create and update the following information**:

Field	Description	Required
Company Name	Official registered company name	□
Company Address	Main business address	□
Mobile Number	Official company mobile contact	Optional
Telephone Number	Official landline number	Optional
Email Address	Official company email	□
Vision	Company vision statement	Optional
Mission	Company mission statement	Optional
Core Values	Company core values	Optional

System Behavior

Only **HR Admin / System Administrator** should be allowed to edit the company profile.

Regular employees should have **view-only access**.

System flow:

Admin updates Company Profile

|

System saves configuration
|
Information reflects across HRIS modules
|
END

3. Tab 2 – Organizational Chart

The **Organizational Chart** visually displays the company's reporting structure.

This chart is **automatically generated** by the system based on employee information entered during **employee enrollment**.

The chart updates automatically when:

- New employee is added
- Employee position changes
- Employee department changes
- Reporting manager changes
- Employee separation occurs

Organizational Chart Data Source

The system must generate the chart based on the following fields during **employee enrollment**:

Field	Description
Employee Name	Name of employee
Department	Employee department
Position Title	Employee job title
Employment Level	Rank and File / Supervisory / Managerial
Immediate Superior	Direct reporting manager

Organizational Chart System Logic

The HRIS must automatically build the reporting structure based on **Immediate Superior relationships**.

Example structure:

CEO
|
Operations Manager
|
Sales Supervisor
|
Sales Associate

Logic rule:

Employee → reports to → Immediate Superior

The system should dynamically place employees under their assigned manager.

Organizational Chart Process Flow

START
|
Employee enrolled in HRIS
|
System records position and reporting manager
|
System assigns employee under Immediate Superior
|
Organizational chart automatically updates
|
END

Organizational Chart Display Requirements

The system should display:

Element	Description
Employee Name	Full name
Position Title	Job title
Department	Department name
Reporting Line	Manager relationship

Optional enhancements (recommended):

- Employee photo

- Expand / collapse hierarchy
- Department filtering

Organizational Chart System Logic Table

Condition	System Action
New employee added	Add to org chart
Reporting manager assigned	Place under manager
Employee promoted	Update chart hierarchy
Employee transferred department	Update chart
Employee resigned	Remove from chart

Recommended System Features

Interactive Org Chart

Allow users to:

- Expand hierarchy
- Collapse hierarchy
- Search employees

Department Filtering

Managers can view org chart by:

- Department
- Team
- Business unit

Automatic Updates

The system should **automatically update the org chart** whenever employee records change.

Required Fields During Employee Enrollment

To ensure the Org Chart works correctly, the **Employee Enrollment Module** must include:

Field	Required
Department	☐
Position Title	☐
Employment Level	☐
Immediate Superior	☐

Without these fields, the system cannot build the reporting structure.
